

Investments in Carbon markets feature at the 2nd IRF Roads and Environment Conference

After a first, very successful conference on Roads and Environment held in February 2007, the International Road Federation launches its **2nd Roads and Environment Conference**, to be held in Geneva, Switzerland, on **10-11 November 2008**.

This year the focus will be on innovative techniques aiming at **emissions reduction and energy savings** in the road sector. We will address eco-material, water management and noise mitigation.

The IRF Greenhouse Gas Calculator will have its main modules ready for being launched. The IRF **GHG Calculator** aims at harmonising the procedure for calculating GHG emissions from road projects with a view to report these emission data and to make them available for subsequent use in **carbon offsetting**.

Financial and market instruments will be of course an important part of the offsetting portfolio that will accompany our calculator. Therefore, we are happy to invite you to an exciting panel discussion about this fast-growing investment market.

The **panel discussion "Trading on carbon markets"** with key experts will explore this relevant topic on **Monday, 10th November 2008 from 16.00-18.00**. This will be an excellent opportunity for companies interested in this new market to meet key Swiss and international finance experts.
