

## Submit your best industry's practices!

Environmental issues have been on top of the world agenda for a quite a while. The road sector is particularly frowned upon. However, only a restricted number of people are fully aware of the time, research and resources invested by our members in the development of eco-friendly processes and materials.

The IRF Working Group Environment felt that it was time to largely publicise our members' research and best practices.

**We are therefore preparing a publication show-casing your innovations, research, applications which are advancing the cause of the environment.**

For this first volume, we would like to invite you to send us your show-case (example of projects, products, techniques, research) in the field of:

- **eco-materials and recycling**
- **water management and pollution prevention**
- **noise abatement and mitigation**

Examples taking into consideration resources conservation, reduction of emissions and energy consumption, pollution prevention are particularly welcome. We look specifically for practices that are innovative, cost efficient and with a proven record. In short, they should work and be financially viable.

**The deadline for submission is Monday 28 April 2008**
